HELPER

Mounira Tidjani and Eva Trancho

Index

Introduction

Our application consists on a project with IES EL Rincón about a tour of the school with 360º photos.
*In this activity we used HelpNDoc because the teacher recommended us to use it, and also because it seemed very easy to use.*

Tool used: HelpNDoc

HelpNDoc is a modern help documentation authoring tool with an intuitive user interface where you can write or import your content and produce more than 8 documentation formats, including help files, web pages, user manuals, documents, Markdown, eBooks…

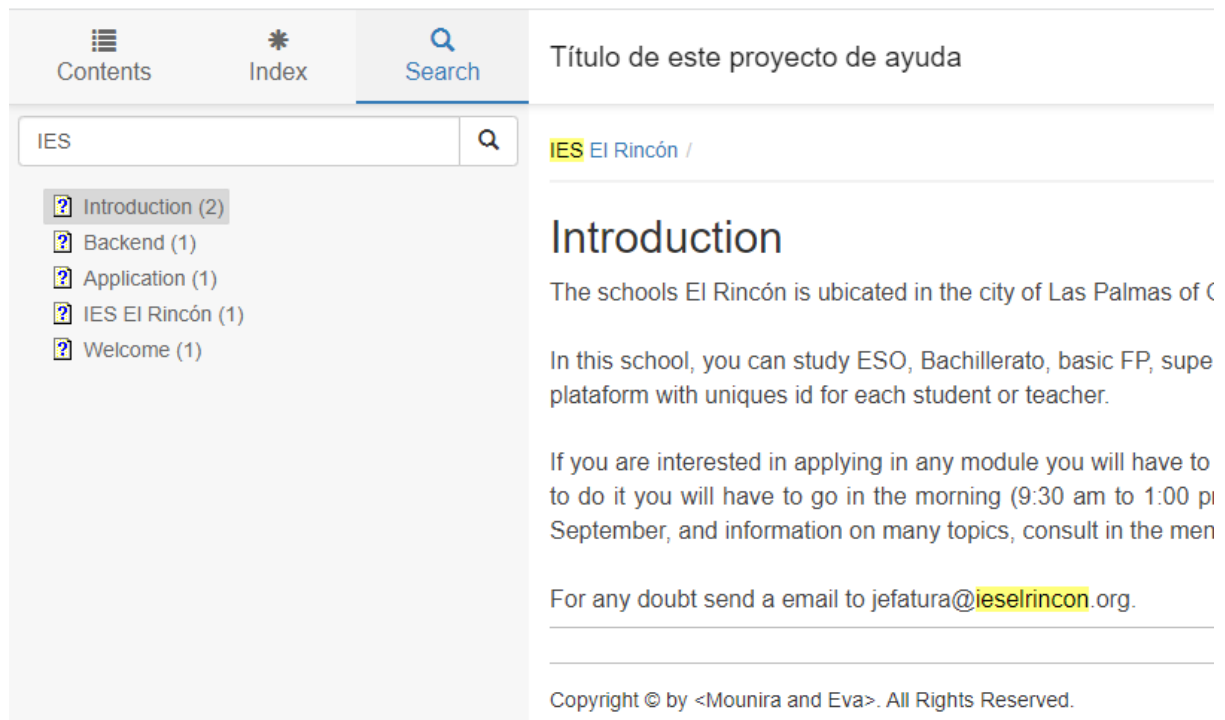

As you can see it is very easy to use because it looks like Microsoft Word:
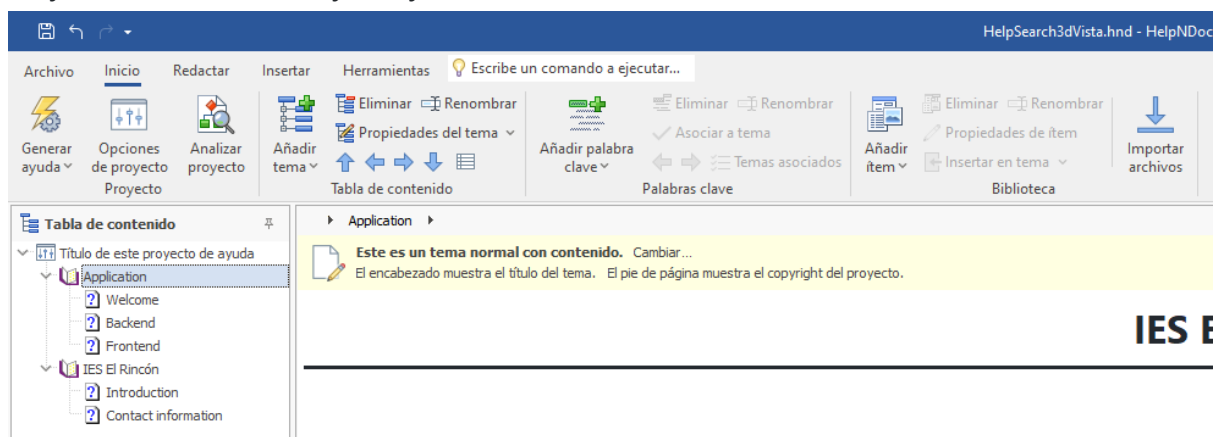

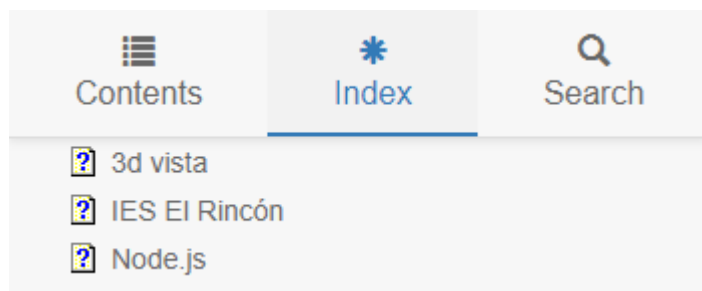

Now our help search working looks like this:
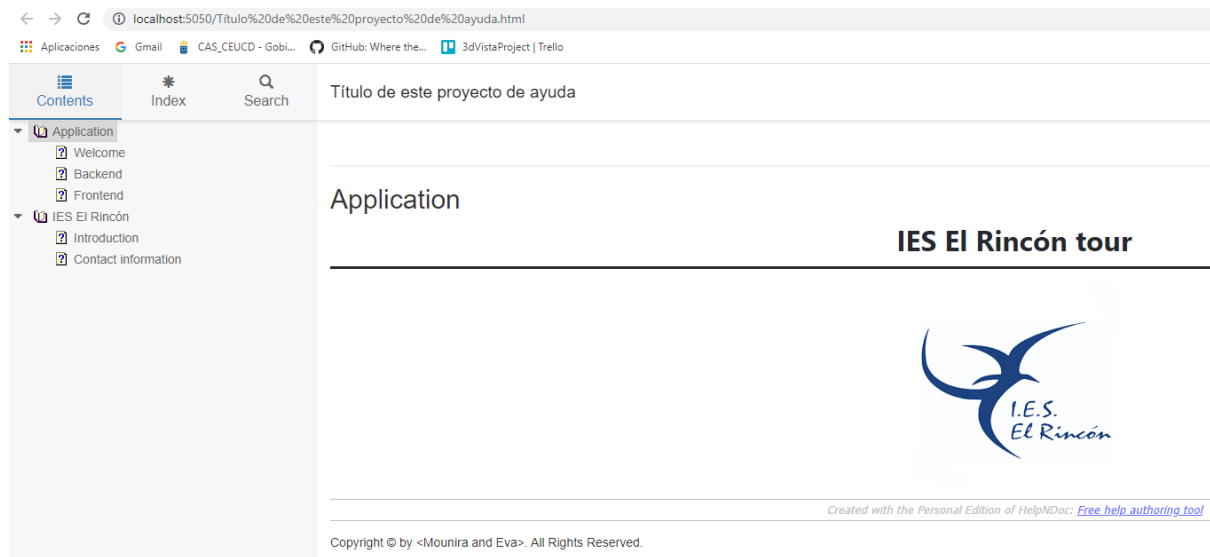

You can see the 7 html created and you can also search for a specific word:

And also there is an index with important words:

Conclusion

In our opinion, doing a help search in any project is very important and useful for the clients because it helps them figure out how the application works in case they are confused or lost.

In conclusion, a help search should be done more regardless of the project.
